Geometry of Crystallographic Groups (Algebra and Discrete Mathematics)

By Andrzej Szczepanski

Crystallographic groups are groups which act in a nice way and via isometries on some n -dimensional Euclidean space. They got their name, because in three dimensions they occur as the symmetry groups of a crystal (which we imagine to extend to infinity in all directions). The book is divided into two parts. In the first part, the basic theory of crystallographic groups is developed from the very beginning, while in the second part, more advanced and more recent topics are discussed. So the first part of the book should be usable as a textbook, while the second part is more interesting to researchers in the field. There are short introductions to the theme before every chapter. At the end of a book is a list of conjectures and open problems. Moreover there are three appendices. The last one gives an example of the torsion free crystallographic group with a trivial center and a trivial outer automorphism group.

This volume omits topics about generalization of crystallographic groups to nilpotent or solvable world and classical crystallography.

We want to emphasize that most theorems and facts presented in the second part are from the last two decades. This is after the book of L Charlap Bieberbach groups and flat manifolds was published.

From reader reviews:

Debbie Jones:

Book is to be different for each grade. Book for children until adult are different content. We all know that that book is very important normally. The book Geometry of Crystallographic Groups (Algebra and Discrete Mathematics) has been making you to know about other know-how and of course you can take more information. It is very advantages for you. The e-book Geometry of Crystallographic Groups (Algebra and Discrete Mathematics) is not only giving you considerably more new information but also being your friend when you sense bored. You can spend your personal spend time to read your guide. Try to make relationship with all the book Geometry of Crystallographic Groups (Algebra and Discrete Mathematics). You never feel lose out for everything if you read some books.

Catherine Poppe:

Hey guys, do you would like to finds a new book you just read? May be the book with the headline Geometry of Crystallographic Groups (Algebra and Discrete Mathematics) suitable to you? Typically the book was written by famous writer in this era. The book untitled Geometry of Crystallographic Groups (Algebra and Discrete Mathematics) is the one of several books this everyone read now. This particular book was inspired many men and women in the world. When you read this reserve you will enter the new shape that you ever know just before. The author explained their thought in the simple way, therefore all of people can easily to comprehend the core of this book. This book will give you a wide range of information about this world now. Then we request again, what kind of activity have you got when the spare time coming to anyone of course your answer may unlimited right. Then do you ever try this one, reading ebooks. It can be your alternative with spending your spare time, the particular book you have read will be Geometry of Crystallographic Groups (Algebra and Discrete Mathematics).

Jacki Peters:

Beside this kind of Geometry of Crystallographic Groups (Algebra and Discrete Mathematics) in your phone, it may give you a way to get more close to the new knowledge or information. The information and the knowledge you might got here is fresh from oven so don't become worry if you feel like an older people live in narrow community. It is good thing to have Geometry of Crystallographic Groups (Algebra and Discrete Mathematics) because this book offers to you personally readable information. Do you sometimes have book but you do not get what it's about. Oh come on, that will not end up to happen if you have this in the hand. The Enjoyable arrangement here cannot be questionable, similar to treasuring beautiful island. So do you still want to miss it? Find this book in addition to read it from at this point!
