### Editorial Review

#### Review

"This new book of its very prolific author is based on talks delivered by him at European and North American universities. It takes the form of simulated discussions: expositions are combined with students'questions and remarks. The material is chosen to be accessible with minimal prerequisites and of interest to a broad mathematically oriented audience. ... The text is written in a lively light style with an adequate degree of precision. Even for more advanced readers it provides pleasant reading, showing how to popularise mathematics."

*EMS Newsletter, Vol. 37, Sept. 2000*

### Users Review

#### From reader reviews:

##### **Darren Meekins:**

As people who live in the particular modest era should be upgrade about what going on or information even knowledge to make these individuals keep up with the era which is always change and make progress.
