Quantum Shift in the Global Brain: How the New Scientific Reality Can Change Us and Our World By Ervin Laszlo

The shift from scientific materialism to a multidimensional worldview in harmony with the world's great spiritual traditions

- Articulates humanity's critical choice--to be the last decade of an outgoing, obsolete world, or the first of a new and viable one
- Presents a new "reality map" to guide us through the environmental, scientific, and geopolitical upheavals we are experiencing

Our world is in a Macroshift. The reality we are experiencing today is a substantially new reality--climate change, global corporations, industrialized agriculture--challenging us to change with our rapidly changing world, lest we perish.

In this book, Ervin Laszlo presents a new "reality map" to guide us through the world shifts we are experiencing--the problems, opportunities, and challenges we face individually as well as collectively--in order to help us understand what we must do during this time of great transition. Science's cutting edge now views reality as broader, as multiple universes arising in a possibly infinite meta-universe, as well as deeper, extending into dimensions at the subatomic level. Laszlo shows that aspects of human experience that had previously been consigned to the domain of intuition and speculation are now being explored with scientific rigor and urgency. There has been a shift in the materialistic scientific view of reality toward the multidimensional worldview of multiple interconnected realities long known by the world's great spiritual traditions. By understanding the interconnectedness of our changing world as well as our changing "map" of the world, we can navigate with insight, wisdom, and confidence.

Editorial Review

Review

". . . explores how intuition and speculation are now being given scientific rigor and urgency as a multidimensional worldview emerges." (*The Compendium Newsletter*, Vol. 38, No. 2, Mar/Apr 2010)

"Ervin Laszlo provides the most brilliant, comprehensive, and intellectually satisfying integral theory of everything that I have ever read. . . . His work transcends the vision of Darwin, Newton, Einstein, the quantum pioneers, and many other scientific giants of history." (*Deepak Chopra, M.D., author of The Seven Spiritual Laws of Success*)

"Arguably the world's greatest system theorist and interdisciplinary scientist and philosopher, Ervin Laszlo is a multifaceted individual with a range of interests and talents reminiscent of the great figures of the Renaissance. In an intellectual tour de force and a series of books, Laszlo offers a solution to the current paradoxes in Western science that transcends the boundaries of individual disciplines." (*Stanislav Grof, author of Ancient Wisdom and Modern Science and When the Impossible Happens*)

"Ervin Laszlo has provided thought provoking information to guide us through this period of transition." (*Kathryn Price, book editor, WomensRadio*)

"Our world is undergoing a radical 'macroshift' at the same time as our scientific understanding of reality is revving up for a major paradigm shift. . . . This is truly inspiring stuff!" (*Nexus New Times Magazine*)

"This is a book I recommend for those who are interested quantum physics and the meditative state as it is written in a style I was able to understand, considering my strengths are not in science and mathematics." (*Barbara Martin, reviewer, Jan 2009*)

"It is an exciting time to be alive now, during the evolution of the next step of human consciousness, and reading this book created a safe perspective for me 'to be' in the scheme of things." (*Rahasya Poe, Lotus Guide magazine, Issue No. 25, May/June 08*)

"From a scientifically idealistic point of view, there is something that seems right about this book's advice. . . . From the shifting of political, corporate, and military resources to the planetary ethic, to the latest scientific knowledge, this is a book you wish everyone read." (*Cheznioiu and Kovacs, United Association for Body Psychotherapy, Sep 2008*)

"Whenever I read a book written by a Nobel prize nominee, (peace, in this case, twice) I expect an interesting read. *Quantum Shift in the Global Brain* did not disappoint, but for rather a surprising reason: the book is a strange juxtaposition of societal and global trends, quantum and chaos physics, and pseudoscience, with wide breadth and bold claims. So, it kept me on my toes." (*Donald N. Petcher, Journal of the American Scientific Affiliation, Vol. 61, No. 1, March 2009*)

"Any college-level collection strong in either science or sociology will find this intriguing." (*The Midwest Book Review, June 2008*)

"Laszlo makes a compelling case; his analysis of human populations and resource use provides a good

historical basis to his theory that an industrialized way of life is unsustainable. Not merely content to describe the impending apocalypse, he lays out strategies and solutions to help support our survival." (*Witches & Pagans, Feb 2010*)

"The overall message of the book, however unlikely this seems at present, is that humanity is a system capable of rapid transformation. We will soon enough discover whether this is true." (*David Lorimer, The Scientific and Medical Network, March 2010*)
