
Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering)

By Andrew Clark, Basel Alomair, Linda Bushnell, Radha Poovendran

Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) By Andrew Clark, Basel Alomair, Linda Bushnell, Radha Poovendran

This book presents a framework for the control of networked systems utilizing submodular optimization techniques. The main focus is on selecting input nodes for the control of networked systems, an inherently discrete optimization problem with applications in power system stability, social influence dynamics, and the control of vehicle formations. The first part of the book is devoted to background information on submodular functions, matroids, and submodular optimization, and presents algorithms for distributed submodular optimization that are scalable to large networked systems.

In turn, the second part develops a unifying submodular optimization approach to controlling networked systems based on multiple performance and controllability criteria. Techniques are introduced for selecting input nodes to ensure smooth convergence, synchronization, and robustness to environmental and adversarial noise. Submodular optimization is the first unifying approach towards guaranteeing both performance and controllability with provable optimality bounds in static as well as time-varying networks. Throughout the text, the submodular framework is illustrated with the help of numerical examples and application-based case studies in biological, energy and vehicular systems.

The book effectively combines two areas of growing interest, and will be especially useful for researchers in control theory, applied mathematics, networking or machine learning with experience in submodular optimization but who are less familiar with the problems and tools available for networked systems (or vice versa). It will also benefit graduate students, offering consistent terminology and notation that greatly reduces the initial effort associated with beginning a course of study in a new area.

Editorial Review

From the Back Cover

This book presents a framework for the control of networked systems utilizing submodular optimization techniques. The main focus is on selecting input nodes for the control of networked systems, an inherently discrete optimization problem with applications in power system stability, social influence dynamics, and the control of vehicle formations. The first part of the book is devoted to background information on submodular functions, matroids, and submodular optimization, and presents algorithms for distributed submodular optimization that are scalable to large networked systems.

In turn, the second part develops a unifying submodular optimization approach to controlling networked systems based on multiple performance and controllability criteria. Techniques are introduced for selecting input nodes to ensure smooth convergence, synchronization, and robustness to environmental and adversarial noise. Submodular optimization is the first unifying approach towards guaranteeing both performance and controllability with provable optimality bounds in static as well as time-varying networks. Throughout the text, the submodular framework is illustrated with the help of numerical examples and application-based case studies in biological, energy and vehicular systems.

The book effectively combines two areas of growing interest, and will be especially useful for researchers in control theory, applied mathematics, networking or machine learning with experience in submodular optimization but who are less familiar with the problems and tools available for networked systems (or vice versa). It will also benefit graduate students, offering consistent terminology and notation that greatly reduces the initial effort associated with beginning a course of study in a new area.

About the Author

Andrew Clark is currently an Assistant Professor in the Department of Electrical and Computer Engineering at Worcester Polytechnic Institute. He received the BS degree in Electrical Engineering and the MS degree in Mathematics from the University of Michigan - Ann Arbor in 2007 and 2008, respectively. He received the PhD degree from the Network Security Lab, Department of Electrical Engineering, at the University of Washington – Seattle in 2014. He is author or co-author of 24 peer-reviewed conference papers and six peer-reviewed journal papers, including the IEEE/IFIP William C. Carter award-winning paper (2010), the WiOpt Best Paper (2012), and the WiOpt Student Best Paper (2014), and was a finalist for the IEEE CDC 2012 Best Student Paper Award. He received the University of Washington Center for Information Assurance and Cybersecurity (CIAC) Distinguished Research Award (2012) and Distinguished Dissertation Award (2014). He holds a patent in privacy-preserving constant-time identification of RFID. He will serve on the Technical Program Committee of IEEE Infocom 2016. His research interests include control and security of complex networks, submodular optimization, control-theoretic modeling of network security threats, and deception-based network defense mechanisms.

Basel Alomair is an Assistant Professor and Founding Director of the National Center for Cybersecurity Technology (C4C) in King Abdulaziz City for Science and Technology (KACST), an Affiliate Professor and co-director of the Network Security Lab (NSL) at the University of Washington-Seattle, an Affiliate

Professor at King Saud University (KSU), and a cryptology consultant at various agencies. He was recognized by the IEEE Technical Committee on Fault-Tolerant Computing (TC-FTC) and the IFIP Working Group on Dependable Computing and Fault Tolerance (WG 10.4) with the 2010 IEEE/IFIP William Carter Award for his significant contributions in the area of dependable computing. His research in information security was recognized with the 2011 Outstanding Research Award from the University of Washington. He was also the recipient of the 2012 Distinguished Dissertation Award from the Center for Information Assurance and Cybersecurity at the University of Washington (UW CIAC). He was awarded the 2015 Early Career Award in Cybersecurity by the NSA/DHS Center of Academic Excellence in Information Assurance Research for his contributions to Modern Cryptographic Systems and Visionary Leadership. He authored/co-authored multiple best paper awards.

Radha Poovendran is a Professor and Chairman of the Electrical Engineering Department at UW. He is an elected Fellow of the IEEE for his contributions to security in cyber physical systems. Professor Poovendran is the founding director of the Network Security Lab (NSL) in the Electrical Engineering Dept. at the University of Washington. He is a founding member and the associate director of research of the University of Washington Center for Excellence in Information Assurance Research and Education. His research interests are in the areas of wireless and sensor network security, cyber-physical system security, adversarial modeling, privacy and anonymity in public wireless networks, control-security, games-security and information theoretic security in the context of wireless mobile networks. Professor Poovendran is a recipient of the NSA LUCITE Rising Star Award, National Science Foundation, ARO YIP, ONR YIP, and PECASE (2005) for his research contributions to multi-user wireless security. He is also a recipient of the Outstanding Teaching Award and Outstanding Research Advisor Award from UW EE (2002) and Graduate Mentor Award from Office of the Chancellor at University of California San Diego (2006). Professor Poovendran was
co-author of award-winning papers including IEEE/IFIP William C. Carter Award Paper (2010) and WiOpt Best Paper Award (2012).

Users Review

From reader reviews:

Linda Poteat:

In this time globalization it is important to someone to find information. The information will make anyone to understand the condition of the world. The healthiness of the world makes the information easier to share. You can find a lot of sources to get information example: internet, classifieds, book, and soon. You can observe that now, a lot of publisher that print many kinds of book. Typically the book that recommended for your requirements is Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) this reserve consist a lot of the information of the condition of this world now. This particular book was represented how does the world has grown up. The dialect styles that writer make usage of to explain it is easy to understand. The particular writer made some research when he makes this book. That is why this book appropriate all of you.

Bernard Lewis:

Beside this Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) in your phone, it could possibly give you a way to get nearer to the new knowledge or data. The information and the knowledge you are going to got here is fresh from oven so don't always be worry if

you feel like an old people live in narrow small town. It is good thing to have Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) because this book offers to you personally readable information. Do you sometimes have book but you would not get what it's all about. Oh come on, that will not end up to happen if you have this with your hand. The Enjoyable set up here cannot be questionable, like treasuring beautiful island. So do you still want to miss that? Find this book along with read it from at this point!

Maryellen Tilley:

This Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) is brand-new way for you who has curiosity to look for some information because it relief your hunger associated with. Getting deeper you into it getting knowledge more you know otherwise you who still having bit of digest in reading this Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) can be the light food for yourself because the information inside this particular book is easy to get through anyone. These books develop itself in the form which is reachable by anyone, yeah I mean in the e-book contact form. People who think that in book form make them feel sleepy even dizzy this publication is the answer. So there isn't any in reading a e-book especially this one. You can find actually looking for. It should be here for a person. So , don't miss that! Just read this e-book variety for your better life and knowledge.

Megan Jordan:

What is your hobby? Have you heard that will question when you got college students? We believe that that query was given by teacher to their students. Many kinds of hobby, Every person has different hobby. And you also know that little person including reading or as reading through become their hobby. You need to know that reading is very important and also book as to be the thing. Book is important thing to include you knowledge, except your current teacher or lecturer. You see good news or update regarding something by book. Numerous books that can you take to be your object. One of them is Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering).

Read Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) By Andrew Clark, Basel Alomair, Linda Bushnell, Radha Poovendran for online ebook

Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) By Andrew Clark, Basel Alomair, Linda Bushnell, Radha Poovendran Free PDF d0wnl0ad, audio books, books to read, good books to read, cheap books, good books, online books, books online, book reviews epub, read books online, books to read online, online library, greatbooks to read, PDF best books to read, top books to read Submodularity in Dynamics and Control of Networked Systems (Communications and Control Engineering) By Andrew Clark, Basel Alomair, Linda Bushnell, Radha Poovendran books to read online.
