This is an exciting time to be in the field of web development! The new 7th edition of **Web Development and Design Foundations with HTML5** presents coding web pages in HTML5 and CSS3 with backwards-compatible techniques for older browsers, and also provides practice with new features of HTML5 & CSS3 that are supported by the most current versions of browsers.

Updates for the 7th edition include:

- Expanded coverage of new HTML5 elements and attributes
- Expanded coverage of designing for the mobile web with new sections on
  responsive web design,
  mobile web design best practices,
  viewport meta tag,
  CSS media queries,
  flexible images,
  and testing mobile display
- Expanded coverage of CSS3 properties, including CSS3 flexible box layout
- New sections providing an introduction to jQuery
- Updated code samples, case studies, and web resources

The approach of the book reflects my personal philosophy of teaching web development and emphasizes hands-on practice exercises. Case studies are included throughout the book to provide students an opportunity to apply their new skills. The textbook companion website at webdevfoundations.net has a page for each chapter with hyperlinks for websites listed in the book, information on emerging trends, additional examples, corrections, and review games. Instructor materials are available from the publisher's website.
